Name :- Mulani Sahil Salim

Roll no :- 18CO41 , Class:- TE CO

Subject :- Web development lab

Aim :- Installing and setting LAMP\WAMP\XAMPP

STEP 1 :-

The screenshot shows the XAMPP Apache Friends website. The header includes navigation links: Apache Friends, Download, Add-ons, Hosting, Community, About, and a search bar. The main heading is "XAMPP Apache + MariaDB + PHP + Perl". Below this, there is a section titled "What is XAMPP?" which states that XAMPP is the most popular PHP development environment, a completely free, easy-to-install Apache distribution containing MariaDB, PHP, and Perl. To the right of this text is a video player titled "Introduction to XAMPP" showing the XAMPP logo. At the bottom, there are download buttons for Windows, Linux, and OS X, all for version 7.4.9 (PHP 7.4.9). A green arrow button labeled "Download" points to "Click here for other versions".

The screenshot shows the "Download" section of the XAMPP website. The header is the same as the previous screenshot. The main heading is "Download". Below this, there is a section titled "XAMPP for Windows 7.2.33, 7.3.21 & 7.4.9". This section contains a table with columns for Version, Checksum, and Size. The table lists three versions: 7.2.33 / PHP 7.2.33 (154 Mb), 7.3.21 / PHP 7.3.21 (155 Mb), and 7.4.9 / PHP 7.4.9 (156 Mb). Each row has a "Download (64 bit)" button. Below the table, there are links for "Requirements", "Add-ons", and "More Downloads ». A note states: "Windows XP or 2003 are not supported. You can download a compatible version of XAMPP for these platforms here." To the right of the download section, there is a "Documentation/FAQs" section with text about the lack of a manual and links to Linux, Windows, OS X, and OS X XAMPP-VM FAQs. Below this is an "Add-ons" section with icons for WordPress, Joomla!, Drupal, and Magento, and a note about Bitnami providing a free all-in-one tool.
